AU BALES OFFERED		48,752	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		43,489	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

**MARKET COMMENTARY** Source: AWEX

This week saw overall positive movements for the first time in six selling weeks. Sales volumes increased with an additional 5,164 bales offered; however, despite the increased volume, the national offering was lower than forecast, with 48,752 bales offered, 6,000 fewer than forecast.

With a favourable exchange rate assisting buyers, strong, widespread competition was received from the opening lot. Once again, the strongest interest was seen in the higher-yielding, lower VM lines and those possessing favourable AM results.

Across the country, the MPGs for merino fleece rose by 1-30 cents, with only a few MPGs in the South not enjoying the rises. The skirtings generally recorded small increases, except for some high VM lots that were irregular. The crossbred sector also recorded overall gains, with 26 microns recording the most significant gain for the week (+5.4%). The oddment market was the only sector to record an overall loss for the week, with reductions in all centres.

By the close of trade, the EMI had gained 10 cents to close the week at 1,377. Next week sees 41,293 bales on offer.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1699 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1643 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
