AU BALES OFFERED			* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD			* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

Exporters and direct-to-mill buyers remained committed to their positive buying approach this week, as the market recorded its sixth consecutive weekly rise. With a variety of end-users active in the market, and with our four largest import partners being keen to purchase, the market rose through August for the first time in seven years.

On the supply side, production is at a century low, and wet conditions have slowed shearing in some wool-producing regions, further impacting the volume on offer. On the demand side, anecdotal reports suggest that business from China is only slightly better, but sentiment is more positive than it has been in recent years. Regardless of the underlying cause, the EMI gained 14 cents this week, closing at 1261. It has gained 54 cents since the beginning of July, and 174 cents (16%) over the past 12 months.

Within the Merino fleece sector, the higher-yielding lots were again the most sought after (due to the increased selection of lower-yielding, drought-affected lots on offer). While in the crossbred market, some strong purchases from China ensured a few more cents were added to their values, continuing their 2-year upward run. Carding and carbonising wools were also well sought after, finishing 5-15 cents dearer.

Next week's national offering will see just under 30,000 bales put before the trade.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1509 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
