MARKET COMMENTARY

Week 13 on the Australian Wool Selling Calendar hosted an unusual selling pattern, with Melbourne opening proceedings in isolation on Tuesday due to Friday's AFL grand final public holiday in Victoria. However on Wednesday all three centres were in operation, while on Thursday, only Sydney and Fremantle sold.

Recent anecdotal reports suggest an increase in the occurrence of high mid break wools on the market. Test figures back up this view, with over half of all fleece wool on offer this week carrying a mid-break of 50% and above. With such a large percentage of the offering possessing these unfavourable results, discounts are inevitable and that is exactly what is transpiring. The discounts for these wools continues to grow as buyers struggle to average them into their purchases.

The skirting market had another up and down week. Prices generally fell on the first selling day by 15 to 20 cents, then rose by a similar amount on the second day, to finish relatively unchanged. The crossbred market lost further ground with prices generally falling by 10 to 20 cents, while the oddment sector continues to perform well, with another limited selection being keenly contested, pushing prices higher.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1506 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1310 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
