MARKET COMMENTARY

The Northern Regions first designated Super Fine sale for the season saw a good selection of best & spinners styles on offer in Sydney. Merino fleece categories were the strong performers in the Nth & Sth, with the finer microns gaining 35-40 cents on Wednesday and a further 30-40 cents on Thursday. 19.5 microns and broader finished 35-50 cents dearer on Wednesday and were generally 30 cents dearer in Sydney on Thursday. In Melbourne they closed 30-40 cents dearer, after steadying towards the close, following a 50 cent spike mid sale. Merino skirtings were not as extreme as the fleece however they were generally 40 cents dearer for the week, with the finer microns and better styles most affected.

The carding market was slightly dearer for LKS/CRT/STN leaving the MC indicator up 8 cents for the week.

The crossbred market was generally 10 cents dearer on Wednesday (with limited volumes on offer in Sydney). On Thursday the finer microns (25/26) gained 20-30 cents while the other micron categories were 5-15 dearer.

The forward market also heated up this week with 116,500 kg trading for 19 to 30 microns, out to Jan 2014 with most contracts being for the coming spring months.

Decile Tables are a useful tool for working out price targets.

Percentiles are a more accurate guide to where the market is currently trading (The higher the percentile, the stronger the market).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 year

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1407 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1103 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.
