MARKET COMMENTARY

There was a small national offering totalling less than 34,000 bales this week, due to Melbourne's smaller than usual catalogue brought about by their public holiday on Friday.

Further strength in the finer microns was somewhat overshadowed this week by weakness in the broader types. Thursday did however provide a strong finish with all fleece categories closing off the final day ahead. Lots with low CVH results (<45) found good support, regardless of micron, and attracted significant premiums to the rest of the market. 19.5-microns was the pivot point during the sale with finer than this range gaining 20 to 40 cents clean whilst the broader microns fell 20 cents.

Merino microns have moved in concert for some time now, however this week was a reflection of the divergence that has been in place since early September. Over the past month the finer microns have firmed slightly whilst 21 to 23-microns have lost 100 cents resulting in the Northern Region 19 to 21 micron differential jumping from 25 cents in early August to 134 cents this week.

The skirting market followed a very similar trend with finer microns holding up reasonably well, however the medium sector (19.5 and coarser) generally eased 10 to 20 cents compared to the previous week.

Crossbreds were reasonably limited in supply this week but managed to post increases for the broader microns, while the finer end eased back. Oddments also firmed slightly on a limited selection.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1370 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1247 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

Any highlighted in yellow are recent trades, trading since: Friday, 23 September 2016

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
