MARKET COMMENTARY

After recording 8 consecutive weekly changes without a loss the market retreated this week. Another large national offering of just over 45,000 bales saw the NRI drop 54 cents for the week to close at 1,587 cents, the largest fall in the AWEX-NRI in almost 2 years.

No micron group escaped the price reductions with the entire merino sector generally dropping between 40 and 90 cents. Although better style / spec types were least affected they too were a good 20 to 40 cents easier than the previous sale. A high national passed in rate in the fleece room of over 20% prevented the market from falling further than it did as growers showed their reluctance to accept the drop in prices. As the price of broader wools dropped more than the finer microns the price differentials between microns continue to widen. At the corresponding sale last season the difference between an 18.0 micron and a 21.0 micron was only 85 cents, in just 12 months the price differential has blown out to over 720 cents.

The skirting market performed along the same lines as the fleece with all types and descriptions experiencing large losses, generally between 40 and 60 cents. A limited offering of cardings was the only highlight in an otherwise bleak market with most types and descriptions selling at similar levels to the previous week. Crossbreds followed the lead of the merino sector and experienced corrections also, generally between 5 and 20 cents.

Despite the fall in prices next week's quantity continues to remain high with currently over 49,000 bales rostered for sale in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1428 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1281 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
