AU BALES OFFERED			44,145	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

Improving demand for fine and medium Merino wool continued this week, despite the EMI showing an unchanged value. There were some notable moves in those individual Merino sectors, highlighted by the handy 20-30 cent gains in Fremantle for 19 to 21 microns. That centre currently provides a good portion of those regularly traded China types with lower VM (the prime attraction to completing exporters' orders alongside other tested readings).

The quality of the Eastern Australian offering was responsible for holding or depreciating prices in those two selling centres. In fact, within each micron grouping, the easier-to-place sale lots with attractive results were dearer for the week, but the sub-par types lowered more than the better types gained, so an overall loss was recorded within some sectors. This was particularly in play on the final day of selling at the standalone Melbourne sale, whereby a larger percentage of the harder-to-place lots were offered, and price falls were felt across the board. Local exporters were the primary buyers this week, with some back-to-back weeks of trading opportunities providing renewed confidence for them to step in to fully support the market whilst continuing to juggle finances. With one keen eye on the upcoming single-week recess in auction sales to provide some financial relief, buyers have a growing positive sentiment for the bettering fortunes of the market, particularly if logistics improve, offered quantities lower, and quality improves.

Within the Merino sectors, Chinese buying remains dominant; however, the ongoing interest from the Indian sub-continent and Europe has an important role in maintaining price levels and providing some impetus for potential improvement of the grower returns. The orders may be sporadic and less in volume from these destinations, but the impact they have on the auction scene is key, in addition to the alternate and viable manufacturing bases for wool textiles they provide. The crossbred wool types have remained reasonably stable since the New Year, with predominantly Chinese buying holding the levels. This week saw the first comprehensive price fall for some weeks, albeit just 15 cents, but that is a large percentage given the current low-price base.

53,000 bales are rostered to sell next week on Tuesday and Wednesday.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1658 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1435 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
